Ride Share App

Ride share is a platform where people looking for a ride for a cheap amount of money and people going to places and looking for accompany or some extra cash meet!

Using Rideshare people can search for a ride with their preferred origin and destination with the day and time of travel and get ride offers from our huge collection of registered users willing to give them ride for a small amount of money depending on the agreement with the driver.

And Looking from the driver's perspective Ride share is a place where they make an extra cash by giving people ride alongside their travel.

What makes us Different

Since our platform is based on the agreement between the ride seeker and the ride giver, **long distance travel** and **ride for free** are available. These services are harder to realize in the famous applications like uber or lyft. Since most people work for these companies within a city (Short distance travel) and the price is set by the application.

Thank You!
